Title : Population in conflict situations

Ouch

Auteurs: Aimée Mwadi, L. Kanyimbo, .SWAA/RDCongo, Province Nd Kivu

Objective:. To determine the link between conflict and risk factors for women and young girls affected by the conflict.

Methodology

Collecting data , basic informations on health system .

Interviews of public authority ,community leaders ,youth , militaries, services providers,
|

Résultats

Women and children populations important among Internals displaced . .They are obliged to work hard for food .and don't have access to information ..

.Very high rate of child mortality.

Children Below the age of 5 years suffer of serious malnutrition problem.

Vulnerability risk factors are

- 1°loosing farms ,belongings , poverty expose women to prostitution
- 2 °Promiscuity exposed women to sexual violence.
- 4°Lack of information on HIV and ISTs expose soldiers to HIV and ISTs infections,
- 6°Children born from women victims without support.

Conclusion

placement of displaced populations in host families doesn't facilitate implementation diseases prevention programs .

Existing resources are insufficient for an appropriate response to the HIV AIDS problem ..

Peace, security are indispensable for implementation of intervention programs,
